### Dewatering Screens

Hewitt Robins Dewatering Screens are designed to 'squeeze' out moisture in fine material to make it suitable for conveying. The inclination of a Hewitt Robins dewatering screen ranges between 2-5 degrees uphill angle to give a final moisture content of around 5-15%. Hewitt Robins can supply Dewatering Screens ranging from capacities as little as 10tph up to capacities...

## Horizontal Screens

Hewitt Robins Horizontal/Low Angle Screens can help in reducing conveyor heights, provide space for taller feed hoppers and can be installed where head room is at a premium. Our Horizontal Screens are driven by the Eliptex Vibrator unit which imparts a three-way motion to the screen with horizontal, vertical and elliptical components providing high capacity, fast conveying and sharper sizing....
