## Hewitt Robins successfully supplied **Extra Heavy Duty 5000tph Feeders**

Hewitt Robins previously supplied two extra heavy duty vibrating feeders to a customer in the Middle East. These vibrating feeders are 2.5m wide x 6.5m long and each handle 2500tph which is then fed into a Hybrid Crusher.

The feeders were originally designed to replace 2 existing feeders that could not achieve the required capacity and withstand the column load of the material in the hopper above.

The feeders are of a welded construction and were delivered complete with a lined impact section with 40mm thick Hardox 400 Liners, 2 x 1000mm adjustable stepped grizzly sections spaced between 150-200mm with Hardox 400 tops, 24 springs, a self-synchronising vibrator unit, cardan shaft drive, pulleys and 2 x 75kw drive motors.

These feeders have been operational now for over 24 months trouble free and Hewitt Robins continue to support them.
